EMI TEST REPORT

Test Report No. : 10014479Y-B-R3

Applicant: Hitachi, Ltd.,
Information & Telecommunication Systems Company
Type of Equipment: USB Finger Vein Biometric Authentication Unit
Model No.: PC-KCB100
FCC ID: ZQDPCKCB100
Test regulation: FCC Part 15 Subpart B:2012 Class B
ICES-003 Issue 5 Class B

Test result: Complied

1. This test report shall not be reproduced in full or partial, without the written approval of UL Japan, Inc.
2. The results in this report apply only to the sample tested.
3. This sample tested is in compliance with the limits of the above regulation.
4. The test results in this test report are traceable to the national or international standards
5. This test report must not be used by the customer to claim product certification, approval, or endorsement by any agency of the Federal Government
6. The opinions and the interpretations to the result of the description in this report are outside scopes where UL Japan has been accredited.
7. This report is a revised version of 10014479Y-B-R2. 10014479Y-B-R2 is replaced with this report.

Date of test:

Section 2 : Equipment under test (E.U.T.)

2.1 Identification of E.U.T.

Type of equipment : USB Finger Vein Biometric Authentication Unit
Trade name : Hitachi, Ltd.
Model No. : PC-KCB100
Serial No. : PE07SPL0000000
Rating : DC 5.0 V / 0.5A
Country of Mass-production : Japan
Condition of EUT : Engineering prototype
(Not for Sale: This sample is equivalent to mass-produced items.)
Size : 57 x 80 x 71 (Width x Length x Height (mm))
Modification of EUT : No modification by the test lab.
Receipt Date of Sample : May 20, 2013

2.2 Product description

Model: PC-KCB100 (referred to as the EUT in this report) is a USB Finger Vein Biometric Authentication Unit. .
The clock frequencies used in the EUT: 24 MHz (Xtal), 120 MHz

Section 3 : Test specification, procedures and results

3.1 Test Specification

Test Specification : FCC Part 15 Subpart B: 2012, final revised on December 27, 2012 and effective January 28, 2013
Title : FCC 47CFR Part15 Radio Frequency Device
Subpart B Unintentional Radiators
Test Specification : ICES-003 Issue 5
Title : Spectrum Management and Telecommunications
Interference-Causing Equipment Standard
Information Technology Equipment (ITE) – Limits and methods of measurement

3.2 Procedures & results

Item	Test Procedure	Limits	Deviation	Worst margin	Result
Conducted emission	ANSI C63.4:2003 7. AC powerline conducted emission measurements	Class B	N/A	24.7 dB (8.6126 MHz, QP, N)	Complied
Radiated emission	ANSI C63.4:2003 8. Radiated emission measurements	Class B	N/A *1)	12.9 dB (105.62 MHz, Vertical)	Complied
*1) Measurements were limited up to 2 GHz since the highest frequency of internal source of the EUT is between 108 MHz and 500 MHz. Note: UL Japan's EMI Work Procedures No. 13-EM-W0420					

3.3 Addition to standard

No addition, exclusion nor deviation has been made from the standard.

3.4 Confirmation

UL Japan, Inc. hereby confirms that E.U.T., in the configuration tested, complies with the specifications FCC Part 15 Subpart B:2012 Class B and ICES-003 Issue 5 Class B.

3.5 Uncertainty

The following uncertainties have been calculated to provide a confidence level of 95% using a coverage factor k=2.

Section 4 : Operation of E.U.T. during testing

4.1 Operating modes

The EUT exercise program used during testing was designed to exercise the various system components in a manner similar to typical use.

Test sequence is used:

1. Running mode
2. Standby

※As for Radiated emission, standby mode was omitted in consideration of the worst mode.

Justification: The system was configured in typical fashion (as a customer would normally use it) for testing.

4.2 Configuration and peripherals

This page has been submitted for a separate exhibit.

Section 5 : Conducted emission

5.1 Operating environment

The test was carried out in shielded room.

Temperature : See data

Humidity : See data

5.2 Test configuration

EUT was placed on a wooden platform of nominal size, 1m by 1.8m raised 80cm above the conducting ground plane. The rear of tabletop was located 40cm to the vertical conducting plane. The rear of EUT and its peripherals was aligned and flushed with rear of tabletop. All other surfaces of tabletop were at least 80cm from any other grounded conducting surface.

EUT was located 80cm from the LISN and excess AC cable was bundled in center. I/O cables that were connected to the peripherals were bundled in center. They were folded back and forth forming a bundle and were hanged at a 40cm height to the ground plane. Each EUT current-carrying power lead, except the ground (safety) lead, was individually connected through a LISN to the input power source. All unused 50ohm connectors of the LISN were resistively terminated in 50 ohm when not connected to the measuring equipment.

Photographs of the set up are shown in Appendix 1.

5.3 Test conditions

Frequency range : 0.15 - 30 MHz

EUT position : Table top

5.4 Test procedure

The AC Mains Terminal Continuous disturbance Voltage had been measured with the EUT in shielded room. The EUT was connected to a Line Impedance Stabilization Network (LISN).

An overview sweep with peak detection has been performed.

The measurements had been performed with a quasi-peak detector and if required, with an average detector.

The conducted emission measurements were made with the following detector function of the test receiver.

Detector Type : QP / AV

IF Band width : 9 kHz / 9 kHz

5.5 Results

Summary of the test results: Pass

Section 6 : Radiated emission

6.1 Operating environment

This test was carried out in open area test site.

Temperature : See data

Humidity : See data

6.2 Test configuration

EUT was placed on a table which was consisted by wooden, polyethylene foam and polycarbonate of nominal size, 1m by 2.33m raised 80cm above the conducting ground plane.

The rear of EUT and its peripherals was aligned and flushed with rear of tabletop.

I/O cables that were connected to the peripherals were bundled in center. They were folded back and forth forming a bundle and were hanged 40cm height to the ground plane. The measurements were performed for vertical or horizontal antenna polarization or both as necessary. The measurement antenna was varied in height above the conducting ground plane to obtain the maximum signal strength.

Photographs of the set up are shown in Appendix 1.

6.3 Test conditions

Frequency range : 30 - 2000 MHz

Test distance : 3m

EUT position : Table top

6.4 Test procedure

The Radiated Electric Field Strength intensity has been measured on an open test site with a ground plane at a distance of 3m. Pre check measurements were performed in shielded room with a search coil at 30-2000MHz to distinguish disturbances of EUT from the ambient noise.

Measurements were performed with quasi-peak detector.

The measuring antenna height was varied between 1 and 4m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity.

The measurements were performed for vertical or horizontal antenna polarization or both as necessary.

The radiated emission measurements were made with the following detector function of the test receiver and spectrum analyzer.

	<u>30-1000 MHz (Test receiver)</u>	<u>1000-2000 MHz (Spectrum analyzer) *2)</u>
Detector Type:	: QP	AV *1) PK
IF Band width:	: 120 kHz	RBW 1MHz/ VBW 10 Hz RBW 1MHz/ VBW 3 MHz

*1) When using Spectrum analyzer, the test was made with adjusting span to zero by using peak hold.

*2) The measurement was conducted at 3 dB bandwidth.

6.5 Results

Summary of the test results: Pass

The expiration date of the calibration is the end of the expired month .

As for some calibrations performed after the tested dates , those test equipment have been controlled by means of an unbroken chains of calibrations .

All equipment is calibrated with valid calibrations . Each measurement data is traceable to the national or international standards .

Test Item :

CE: Conducted emission ,

RE: Radiated emission
